

Unlimited Energy solar customer,

This email is to make you aware of a new incentive program that we suggest you sign up for. Your solar system produces Renewable Energy Credits (RECs), which are expected to have monetary value in the near future, and may provide you an annual revenue stream in addition to the electricity saving you are already receiving from your solar system.

In order to sell your RECs, you need to register your system in the state REC registry and tracking system. Unlimited Energy Solar Solutions, Inc. has partnered with [Leaf Exchange](#) who provides a simple way for solar system owners to sell their RECs for income, in addition to providing registration services and REC market education.

- There is no cost to register through Leaf Exchange.
- The system owner maintains 100% of the ownership rights of their RECs.
- Leaf Exchange will charge a \$3 per REC brokerage fee when you sell your RECs.
- This program does not jeopardize any of your current rebates and/or Net Metering Agreement.

Recent price indications on the value of California RECs are in the \$20 per REC range, which would translate into \$200 of annual income from an average sized 5 kW solar system producing ~10 RECs annually. It is in your best interest to register now, because you only begin accumulating RECs once your system is registered. In other words you cannot retroactively go back and bank RECs on your previous production.

To register simply complete the [Leaf Exchange web submission form](#). The entire process takes about 10 minutes. You can contact Leaf Exchange directly with any questions or comments.
